

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Currently amended) A method for diagnosing performance in a database, the method comprising:

receiving information indicative of a set of rules classifying operations performed in a database as one or more performance problems ~~in a database~~;

determining one or more values that quantify an impact for the one or more performance problem based on performance of operations in the database;

determining a first performance problem from the one or more performance problems based on a matching between the one or more values for the one or more performance problems and at least one rule in the set of rules; and

generating information indicative of a recommendation for a solution for the first performance problem.

2. (Currently amended) The method of claim 1, wherein the set of rules for the one or more performance problems include symptoms and root problems, wherein symptoms are analyzed to determine a root performance problem.

3. (Previously presented) The method of claim 2, wherein the symptoms are classified from a first set of performance problems to a second set of performance problems.

4. (Currently amended) The method of claim 2, wherein the information indicative of the recommendation for a solution comprises any symptoms that were analyzed to determine the root performance problem.

5. (Canceled).

6. (Previously presented) The method of claim 1, wherein the one or more values comprising time values that quantify the impact of the one or more performance problems.

7. (Currently amended) The method of claim 6, further comprising determining the time values using at least one of a time model that classifies operations in the database as wasteful operations and a wait model that classifies operations in the database waiting for completion of one or more external events.

8. (Currently amended) The method of claim 1, wherein ~~determining~~ generating the information indicative of the recommendation for the solution comprises:
determining one or more operations in the database that caused the first performance problem; and
reviewing analyzing stored information for the one or more operations absent direct user intervention to determine generate the information indicative of the recommendation for the solution.

9. (Original) The method of claim 8, wherein the stored information comprises a snapshot of information for the one or more operations.

10. (Currently amended) The method of claim 1 further comprising[[.]] ~~wherein automatically~~ determining the recommendation for the solution ~~comprises automatically determining the recommendation for the solution~~ in response to determining the first performance problem.

11. (Currently amended) The method of claim 1, further comprising:
determining a recommendation rule [[for]] from a set of recommendation rules associated with the first performance problem, each recommendation rule in the set of recommendation rules indicative of at least one recommendation for a solution for the first performance problem;

determining one or more operations that caused the first performance problem;

applying the recommendation rule to the one or more operations; and
determining a recommendation for the solution using in response to a
determination that the one or more operations satisfy the recommendation rule.

12. (Original) The method of claim 1, further comprising outputting the recommendation for the solution.

13. (Currently amended) The method of claim 1, further comprising determining generating information specifying one or more operations performed in the database that are not causing performance problems ~~in the database~~.

14. (Currently amended) A method for diagnosing one or more performance problems in a database, the method comprising:

collecting information that quantifies an impact for one or more operations performed in the database;

associating the information for one or more operations with the one or more performance problems;

analyzing the associated information for the one or more performance problems based on a set of rules classifying operations performed in a database into one or more performance problems to determine a first performance problem from the one or more performance problems; and

generating information indicative of a recommendation for a solution for the first performance problem.

15. (Previously presented) The method of claim 14, wherein collecting information comprises:

determining when one or more operations that are associated with the one or more performance problems are being performed; and

timing the one or more operations that are associated with the one or more performance problems to generate one or more time values for the operations that quantify the impact of the operations.

16. (Currently amended) The method of claim 15, wherein the one or more operations that are associated with the one or more performance problems are determined based on at least one of a time model that classifies operations in the database as wasteful operations and a wait model that classifies operations in the database waiting for completion of one or more external events.

17. (Currently amended) The method of claim 14, ~~further comprising classifying wherein the set of rules for~~ the one or more performance problems ~~into include~~ symptoms and root problems, wherein symptoms are analyzed to determine a root performance problem.

18. (Currently amended) The method of claim 17, wherein the information indicative of the recommendation for the solution comprises any symptoms that were analyzed to determine the root performance problem.

19. (Canceled).

20. (Currently amended) The method of claim 14, wherein ~~determining~~ generating the information indicative of the recommendation for the solution comprises:
determining one or more operations in the database that caused the first performance problem; and
reviewing stored information for the one or more operations to ~~determine~~ generate the information indicative of the recommendation for the solution.

21. (Original) The method of claim 20, wherein the stored information comprises a snapshot of information for the one or more operations.

22. (Currently amended) The method of claim 14, wherein further comprising automatically determining the recommendation for the solution comprises automatically determining the recommendation for the solution in response to determining the first performance problem.

23. (Currently amended) The method of claim 14, further comprising:
determining a recommendation rule [[for]] from a set of recommendation rules associated with the first performance problem, each recommendation rule in the set of recommendation rules indicative of at least one recommendation for a solution to the first performance problem;

determining one or more operations that caused the first performance problem;
applying the recommendation rule to the one or more operations; and
determining a recommendation for the solution using in response to a determination that the one or more operations satisfy the recommendation rule.

24. (Original) The method of claim 14, further comprising outputting the recommendation for the solution.

25. (Currently amended) The method of claim 14, further comprising determining generating information specifying one or more operations performed in the database that are not causing performance problems in the database.

26. (Currently amended) A computer program product stored on a computer-readable medium for diagnosing performance in a database, the computer program product comprising:

code for receiving information indicative of a set of rules classifying operations performed in a database as one or more performance problems in a database;

code for determining one or more values that quantify an impact for the one or more performance problems based on performance of operations in the database;

code for determining a first performance problem from the one or more performance problems based on a matching between the one or more values for the one or more performance problems and at least one rule in the set of rules; and

code for generating information indicative of a recommendation for a solution for the performance problem.

27. (Currently amended) The computer program product of claim 26, ~~wherein~~ further comprising code for automatically determining the recommendation for the solution comprises code for automatically determining the recommendation for the solution in response to determining the first performance problem.

28. (Currently amended) The computer program product of claim 26, further comprising:

code for determining a recommendation rule [[for]] from a set of recommendation rules associated with the first performance problem, each recommendation rule in the set of recommendation rules indicative of at least one recommendation for a solution for the first performance problem;

code for determining one or more operations that caused the first performance problem;

code for applying the recommendation rule to the one or more operations; and

code for determining a recommendation for the solution ~~using in response to a determination that~~ the one or more operations satisfy the recommendation rule.

29. (Currently amended) A computer program product stored on a computer-readable medium diagnosing one or more performance problems in a database, the computer program product comprising:

code for collecting information that quantifies an impact for one or more operations performed in the database;

code for associating the information for one or more operations with the one or more performance problems;

code for analyzing the associated information for the one or more performance problems based on a set of rules classifying operations performed in the database into one or more performance problems to determine a performance problem from the one or more performance problems; and

code for generating information indicative of a recommendation for a solution for the performance problem.

30. (Previously presented) The computer program product of claim 29, wherein code for collecting information comprises:

code for determining when one or more operations that are associated with the one or more performance problems are being performed; and

code for timing the one or more operations that are associated with the one or more performance problems to generate one or more time values for the operations that quantify the impact of the operations.

31. (Currently amended) The computer program product of claim 29, wherein code for determining generating the information indicative of the recommendation for the solution comprises:

code for determining one or more operations in the database that caused the performance problem; and

code for reviewing stored information for the one or more operations absent direct user intervention to determine generate the information indicative of the recommendation for the solution.

32. (Currently amended) The computer program product of claim 29, wherein further comprising code for automatically determining the recommendation for the solution comprises code for automatically determining the recommendation for the solution in response to determining the performance problem.

33. (Currently amended) The computer program product of claim 29, further comprising:

code for determining a recommendation rule [[for]] from a set of recommendation rules associated with the determined performance problem, each recommendation rule in the set of recommendation rules indicative of at least one recommendation for a solution to the determined performance problem;

code for determining one or more operations that caused the performance problem;

code for applying the recommendation rule to the one or more operations; and

code for determining a recommendation for the solution using in response to a determination that the one or more operations satisfy the recommendation rule.
